Mini Assignment

Create a web application to search and browse news.

Study the <u>top headlines</u> endpoint from NewsAPI (newsapi.org). Using that endpoint create a web application with the following features

A 'landing' page shown below which will allow a user to read news from around the world.

A search consist of the following parameters
- The search term
- Country to search for
- Category of news

Note the above search criterial should match the end point from NewsAPI

News articles returned from a search should be displayed according to the format shown below

A news article consist of the following
- Title – the title of the news article
- Article's image – any images included with the article. If no image is included, then display a placeholder image
- Summary of the article
- Publish time and date
- A link to the article (Read above). When the link is clicked, it should open in a new tab

You should commit your project to a Git repository. Add a .gitignore file to skip committing certain files and directories.
